After studying psychiatry at the University of British Columbia between 1998 and 2003, he entered a two-year clinical scholarship to neuropsychiatry/behavioral neurology, underspecies psychiatry/neurology, assessing and managing complex cases involving traumatic brain injury or disease and brain dysfunction as a result of observed changes in patient behavior, emotional control, physical and cognitive control. In 2008, he was certified by the Joint Council of Neurological Subspecies (a subsidiary of the American Neurological Association) in the subspecies of behavioral neurology and neuropsychities. Recruited by UBC, he served as an inpatient and outpatient physician and supervisor for interns, diagnosis and treatment of patients with various neurological diseases and/or somatoform and conversion disorders. He has developed research experience in deep brain stimulation for movement disorders and depression and obsessive-compulsive disorder, and clinical experience in assessing and managing severe somatization, motion disorders such as dystonia, Parkinson's disease, and Huntington's disease, and psychiatric diseases as a result of neurological diseases or traumatic brain injury. He serves as Education Coordinator in the British Columbia Neuropsychiatry Program, overseeing the training of clinical neuropsychiatry fellows, as well as psychiatry, rehabilitation medicine and neurology residents, as well as optional medical students, in clinical neuropsychatics. His practice is devoted to rehabilitation and optimal care for patients with neurological and psychiatric symptoms, as well as patients with persistent and severe unexplained physical and psychiatric symptoms. DmRF Canada's disclaimer provides general information related to dystonia. It is not intended to provide instructions and you should not rely on this information to determine the diagnosis, prognosis or course of treatment. It should not be used instead of professional consultation with a motion disorder specialist. DMRF Canada is not responsible for the consequences of your decisions related to the use of this information, including, but not limited to, your choice to seek or not seek professional medical care, or to choose or choose a specific treatment based on the information published in the present. You should not ignore the advice of your doctor or other qualified health care provider because of any information you receive from DMRF Canada any other third-party source. If you have any questions about health care, please consult Doctor. The Motion Disorders Clinic at the Javad Mowafaghian Brain Health Center is a clinical component of the Pacific Parkinson's Research Center (PPRC). PPRC is a multidisciplinary center dedicated to the diagnosis and management of Parkinson's disease and related disorders, including tremor and dystonia, and has been designated as the Center of Excellence of the National Parkinson's Foundation in the United States.
